ENDUREED® THATCH SHINGLES¹

ENDUREED® synthetic thatch shingles consist of individual PVC reeds that offer the appearance of natural thatch. The synthetic thatch reeds are bound by a stainless steel binder strip. The stainless steel binder strip is nailed to approved wood roof deck substrates using No. 11 stainless steel nails. The ENDUREED synthetic thatch shingle system testing/approvals include fire classification, accelerated weathering, impact resistance, wind driven rain testing as well as other product and system-related testing. All testing and agency approvals for ENDUREED systems are provided by ENDUREED. Refer to Endureedthatch.com.

SOPREMA® ELASTOPHENE® STICK HR FR+ GR cap sheet may be installed as the self-adhered underlayment for ENDUREED synthetic thatch shingles as specified by ENDUREED. Upon request, and upon satisfactory completion of the installation of the ELASTOPHENE membrane, SOPREMA may offer a SOPREMA Limited Product Replacement Warranty, Form No. LPR-100, for up to 20 years. A sample of this warranty may be obtained at www.SOPREMA.us. The SOPREMA warranty applies only to SOPREMA products. The subsequent installation of an ENDUREED thatch system in accordance with the manufacturer's published guidelines, specifications, testing and approvals, will not invalidate the SOPREMA warranty, which will remain in effect without modification of its terms.
