□ In process

+ The product itself cannot earn a LEED-certifying project an innovation point. Instead, the product needs to one portion of a larger strategy implemented by the project. The innovation category awards a point to teams that "Achieve significant, measurable environmental performance using a strategy not addressed in the LEED green building rating system."

Products in this table have been added as a reference to help professionals seeking LEED® certification. These products do not automatically and/or fully guarantee that points or credits will be granted. The number of points may vary depending on the projects. In order to comply with the requirements, obtaining some points or credits may depend on the quality of the building design and installation of the products. In order to facilitate the success of your project, SOPREMA recommends consulting the documentation relating to the products beforehand and validating whether these contribute to the achievement of the project objectives. It is also suggested that you seek the assistance of a LEED Accredited Professional (AP).
