

PROJECT PROFILE

CLEVELAND MUSEUM OF ART

CLEVELAND, OHIO

ABOUT THE PROJECT

The Cleveland Museum of Art is located in the University Circle neighborhood on Cleveland's east side. It is famous for its extensive display of Asian and Egyptian art. It houses a diverse collection of over 45,000 works of art from around the world. Over the years, it has remained true to the vision of its founders by keeping general admission free to the public. With \$750 million donations, it is one of the wealthiest museums in the nation. With about 598,000 visitors each year, it is among one of the most visited art museums in the world.

The museum's building and renovation project added two new wings. This \$350 million project was the largest cultural project in Ohio's history. SOPREMA's SOPRALENE® FLAM 180 polymer modified bitumen two-ply system was installed. SOPREMA was the ideal manufacturer for the project as they were able to provide a variety of quality products to accommodate the projects' needs with a single source warranty.
